Plastic injection molds

Precision thermoplastic parts, made using high-quality injection molding tools, are a key element of many cutting-edge, cost-effective products.

We can design individual parts or take responsibility for an entire, complex assembly system. Our one- and two-component tools are specially tailored to your needs, with custom ejection systems and carefully optimized tempering processes delivering high-quality parts, quick.

In particular, our innovative ideas and development of current standards make our tools extremely cost effective for mass produced components.

Your benefits at a glance:

- Short cycle times
- Maximum durability
- Specific tools for specific tasks
- Low tooling cost per piece
