

Ideas taking shape.

—— Joyson Tooling Europe

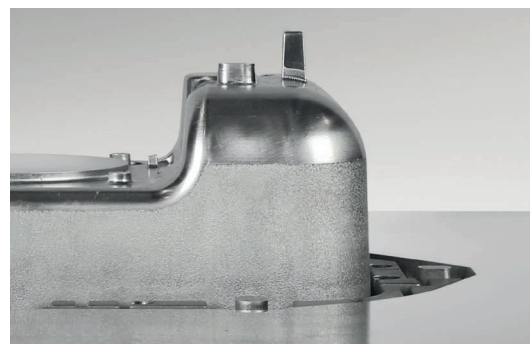

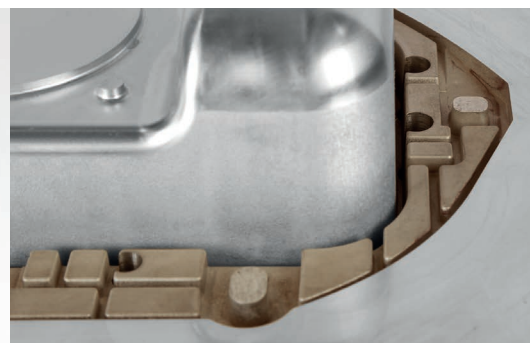

—— Tooling and plant construction / Product portfolio

Prototype molds

Prototypes and special series production runs are an essential part of the product development process. We design and make cost-effective prototype tools requiring a combination of know-how, speed, and flexibility.

As in all areas of our tooling and plant engineering, outstanding quality is a prerequisite when it comes to making prototype tools. We also share our findings during this process with you to help prepare for mass production.

Got an idea? Please come and talk to us!

Your benefits at a glance:

- Variable technology for maximum speed
- Design and function testing
- Small and special runs
