Prototypes

Prototypes are important when it comes to develop products to mass production. The close cooperation between your designers and our prototype division will deliver quick and good results.

Using one- and two-component 3D printing, vacuum casting of plastic parts, foaming in printed tools, CNCs and handmade prototypes, we can provide reliable design or functional prototypes made from materials similar to the real ones.

Your benefits at a glance:

- Speed
- Design and function testing
- Special series production
- Maximum cost-effectiveness
