Semi Automatic Tool Design

SATD is our proprietary design tool and the result of more than 80 years tooling experience. It reduces design times, eliminates avoidable errors, complies with defined standards, and uses standard components and assemblies.

The tool allows your staff to save and safeguard their know-how using CAD, and automatically reuses data in downstream processes. It integrates your standards and design guidelines into a tailor-made SATD — with full support from our experts along the way.

Your benefits at a glance:

- Accelerates tool design time
- Avoids repeat errors
- Safeguards system-based know-how
- Automates repetitive tasks
