## Tool design

Our experienced design teams in Aschaffenburg and Arad work closely together to design tools that are a perfect fit for your product. We use state-of-the-art computer-aided systems as well as our proprietary rule-based and macro-controlled tool SATD (Semi-Automatic Tool Design) to realize our aim: building the best possible tool for you, at an affordable price.

**If you need plastic injection, die casting and foaming tools, you've come to the right place.**

### Your benefits at a glance:

- Design to process
- Design to cost
- Rapid lead times
- SATD for high-quality design
