## Trimming tools

Our trimming tools are carefully aligned with the relevant die cast tools, with component checks to accurately remove surplus material from the sprue and overflow in one pass.

We use fully automatic trimming tools for casting cells with blower systems. Where required, these can be fitted with integrated broaching, drilling or thread cutting units. To ensure maximum durability and ease of maintenance, the knives are exchangeable.

### Your benefits at a glance:

- Process steps combined for reduced cycle time
- Long lifetime
- Low maintenance
- Low tooling cost per piece
